RE: Reference Letter for P & H Heating and Cooling

To whom it may concern,

Our offices and manufacturing areas needed to be evaluated for efficiency and effectiveness for heating and cooling. P & H had replaced my furnace at my home and I was very pleased with their work and professional approach to performing that task.

I called P & H to come to our Company and perform an evaluation of our overall heating and cooling situation and give us a report on what needed to be done and a quote.

P & H came in and performed a very thorough evaluation, took the time to review this with us and explained exactly what needed to be done and gave us a detailed quote.

They relocated one furnace, replaced one furnace, installed a central air conditioning system in our office area and replaced one 40 foot, gas fired, Infrared unit in our plant.

They showed an excellent ability to work with and around our people and operations. They finished on time and to their quote. The improvement in our facility is measurably better and we have not had any issues with the work they performed.

We would highly recommend P & H to any of our business associates and/or friends.

Regards,

Terry L. Williams – CEO
